

**American University Neighborhood Partnership
Transportation and Parking Working Group Summary**

September 19, 2019

Key Discussion Points:

- Presentation: AU Transportation Programs and Questions and Answers
- Fall Meeting Dates

Summary: AU's presentation focuses on how their Transportation Demand Management (TDM) program reduces single occupancy vehicles, reduces AU carbon footprint, and reduces the impact of traffic and congestion on nearby communities. The question and answer session to follow up this presentation touched on the topics of AU's Good Neighbor Policy, designated drop off zones for rideshares and package delivery, and what specific strategies AU has in place for traffic management during special events. The meeting wrapped up by looking ahead at Fall meeting dates and thinking about the importance of identifying shared principles and performance indicators going forward.
